

Build a Custom User friendly HTML Page with Langflow chat

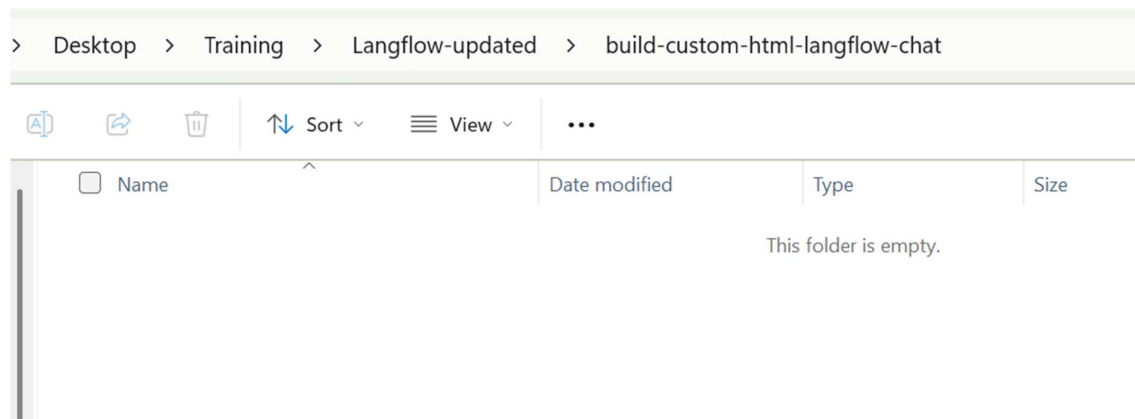

We will be learning how to build a custom user friendly html page –which will be embedded with the Langflow chat

Here we are going Vibe code and create a the HTML Page with Langflow chat

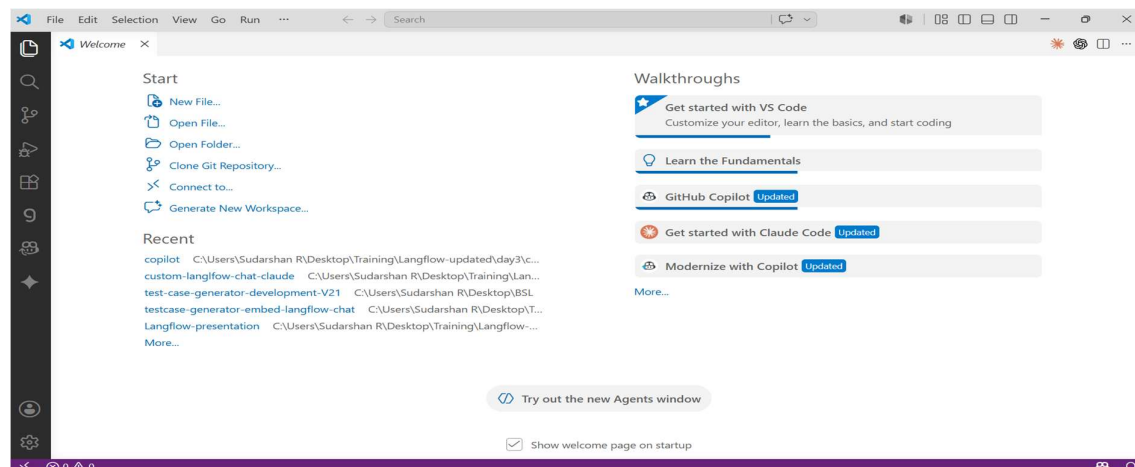

Note

For vibe coding We can use 1) Vscode with Github co-pilot ,claude as coding agent or 2) Kiro

- 1) Create a Folder in your local system where the customized html to be build

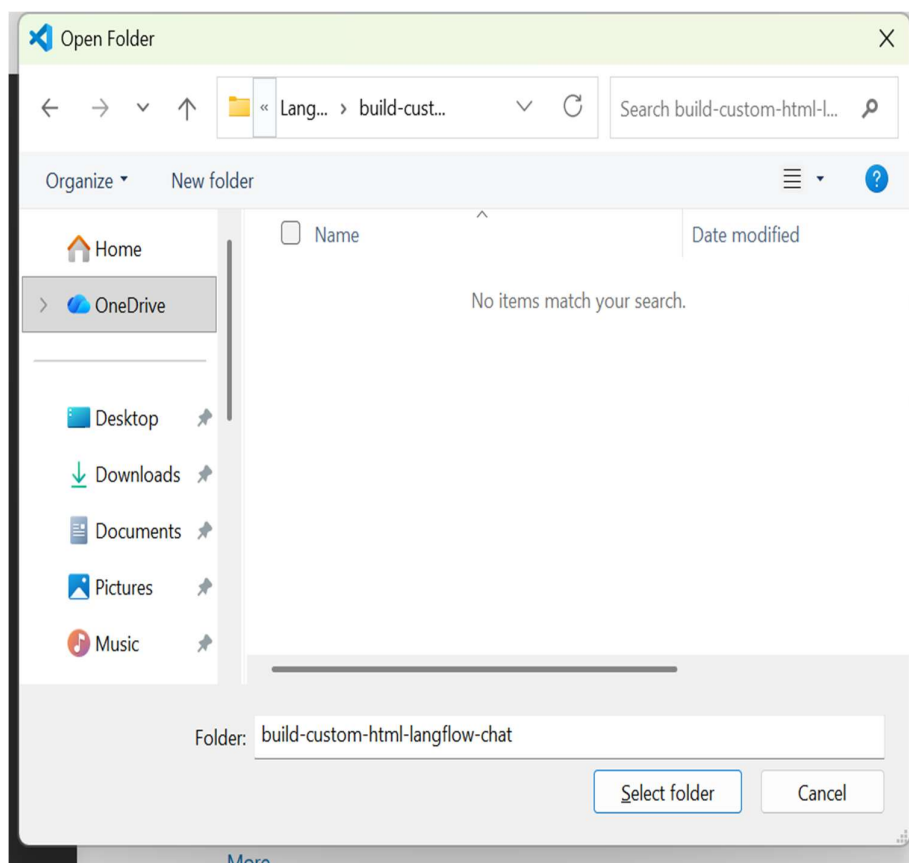

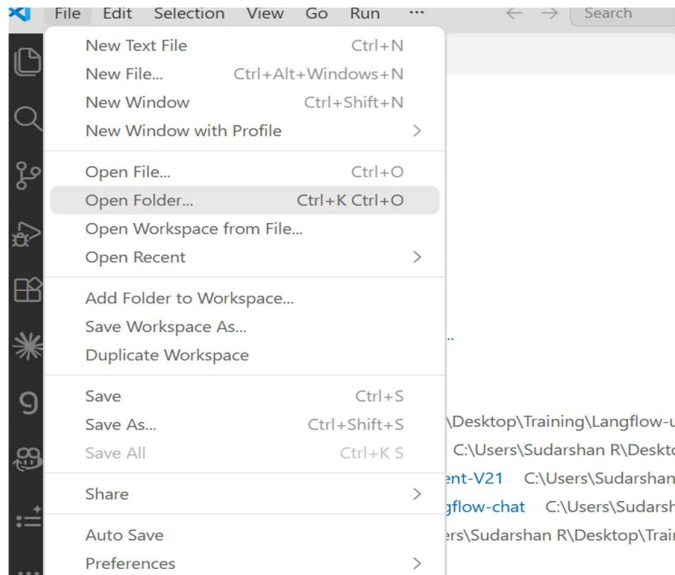

- 2) Open the VS Code /any editor

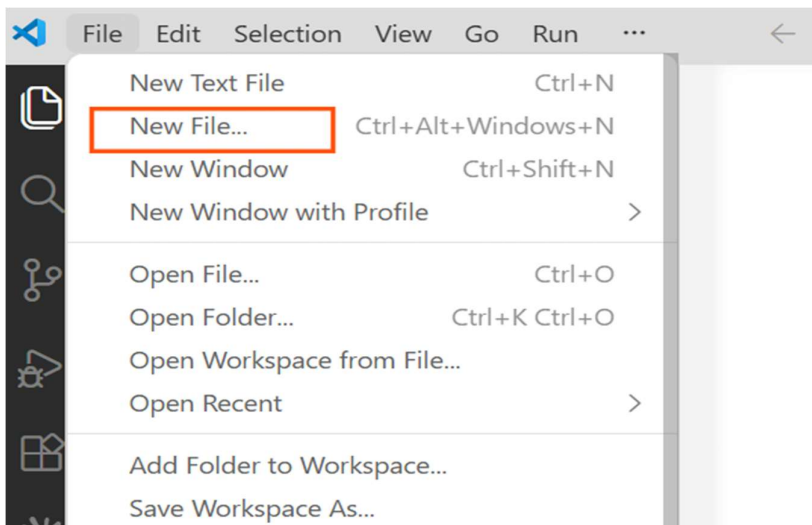

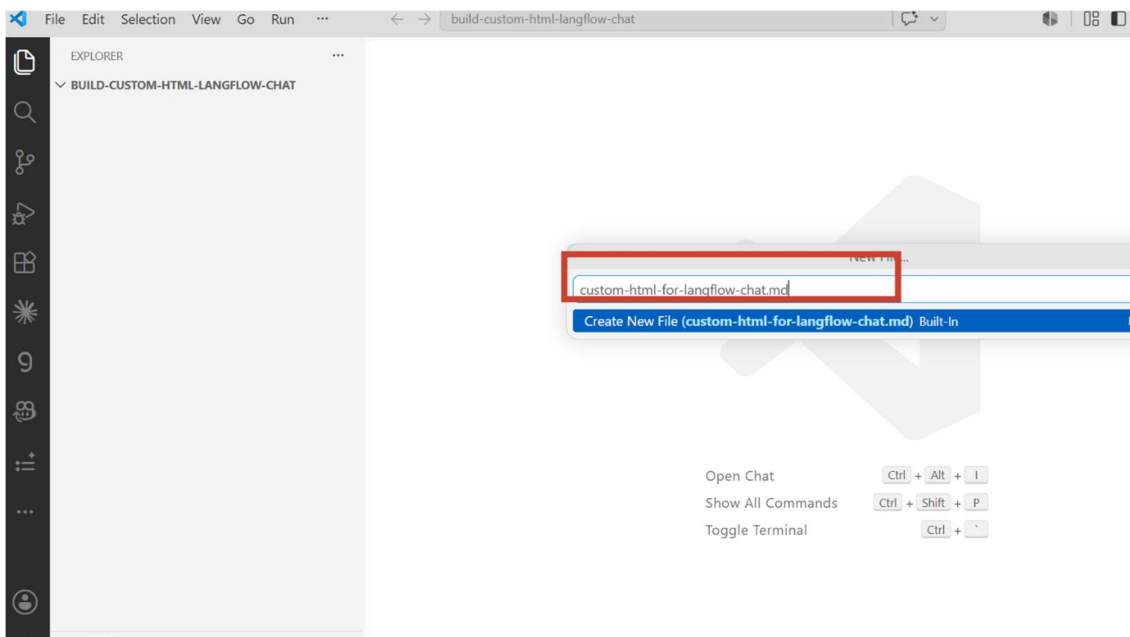

3) Open the folder in the vscode

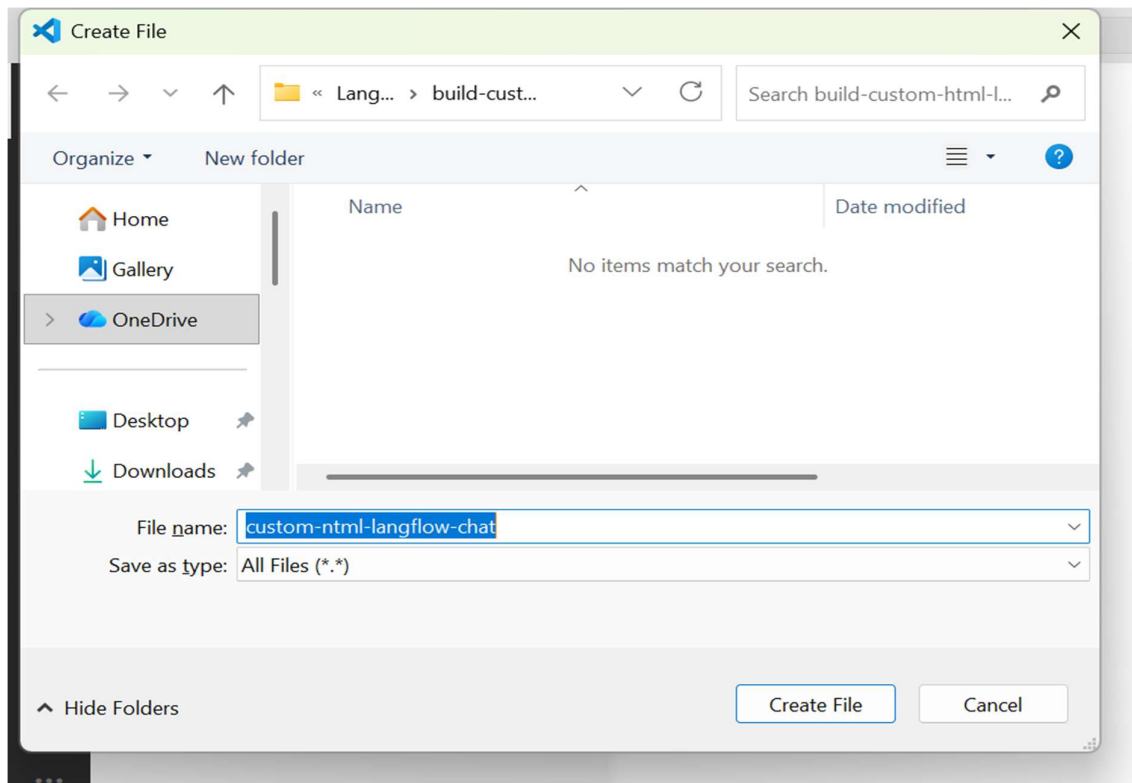

4) Click on File new file

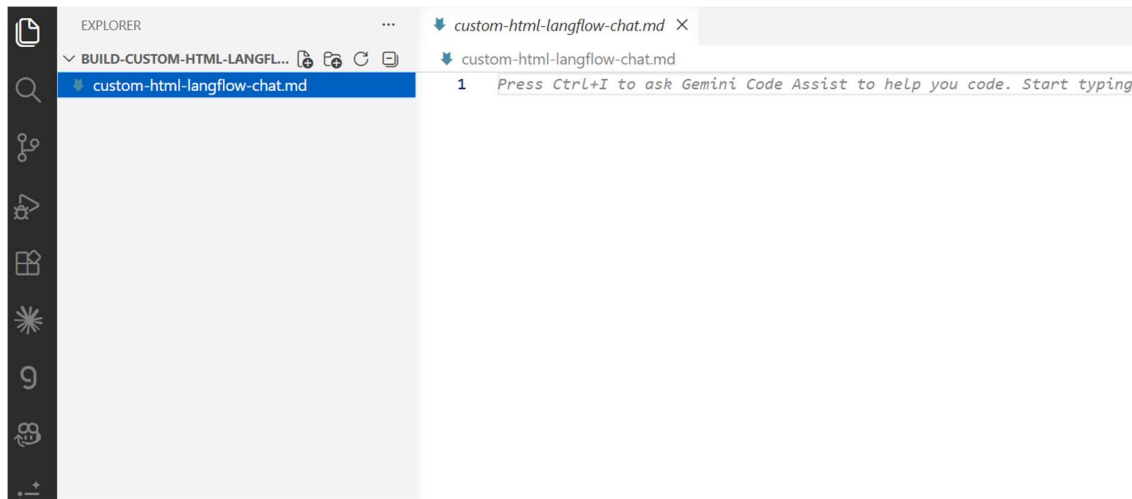

5) Create a md file and click on enter

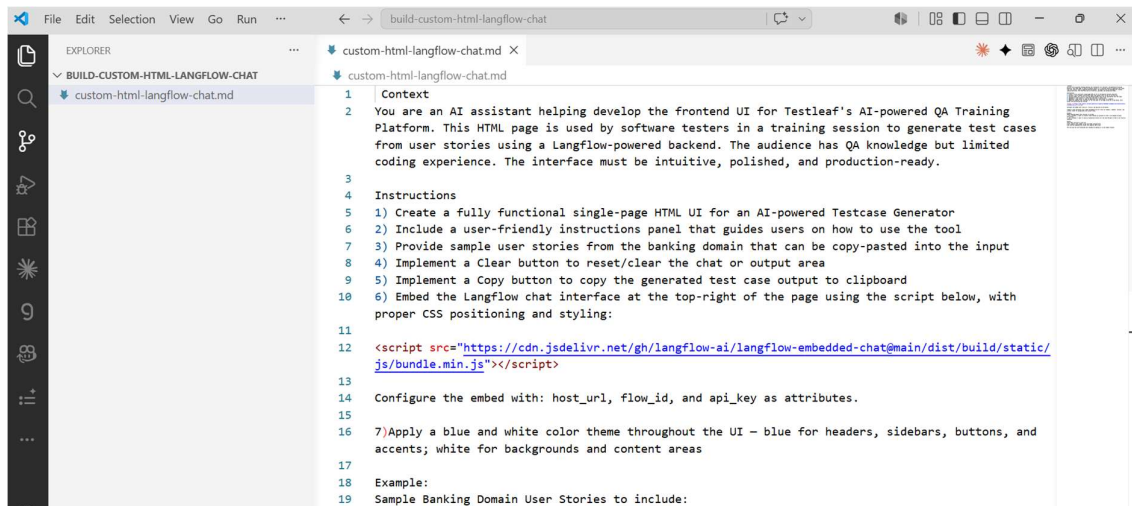

6) Click on create file

7) You can see the created .md file in VS Code

8) Start writing the Prompt for Generating the Custom Html with Langflow chat in the .md file

Note:

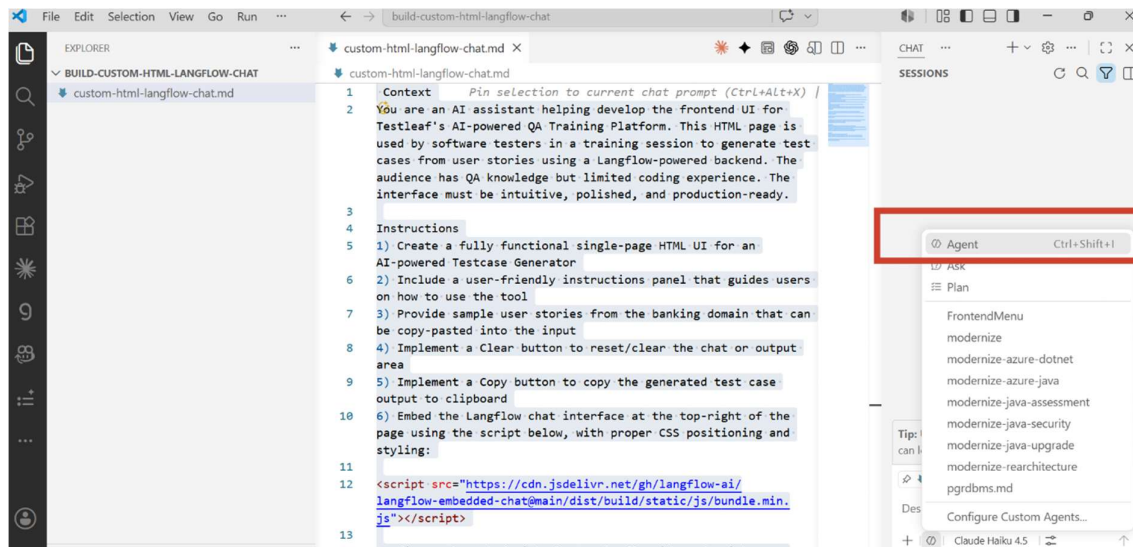

Instructions should be numbered with 1,2 etc

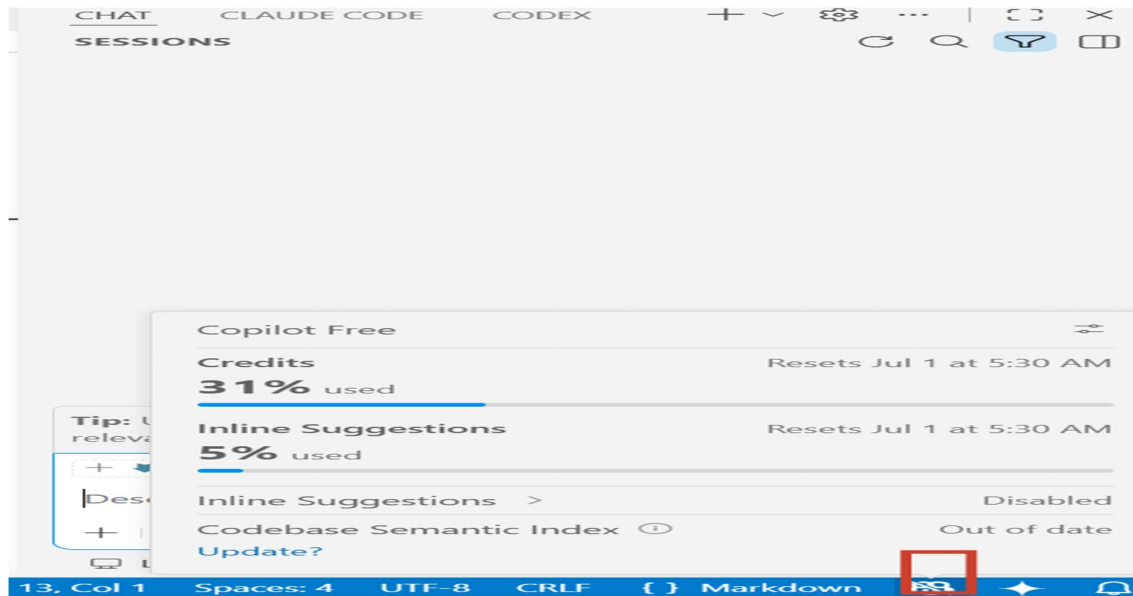

9) Open Copilot or Claude any coding agent (here we are going with Copilot)

```
1 Context Pin selection to current chat prompt (Ctrl+Alt+X) | Don't show this again (Alt+/)
2 You are an AI assistant helping develop the frontend UI for Testleaf's AI-powered QA Training
  Platform. This HTML page is used by software testers in a training session to generate test cases
  from user stories using a Langflow-powered backend. The audience has QA knowledge but limited
  coding experience. The interface must be intuitive, polished, and production-ready.
3
4 Instructions
5 1) Create a fully functional single-page HTML UI for an AI-powered Testcase Generator
6 2) Include a user-friendly instructions panel that guides users on how to use the tool
7 3) Provide sample user stories from the banking domain that can be copy-pasted into the input
8 4) Implement a Clear button to reset/clear the chat or output area
9 5) Implement a Copy button to copy the generated test case output to clipboard
10 6) Embed the Langflow chat interface at the top-right of the page using the script below, with
    proper CSS positioning and styling:
11
12 <script src="https://cdn.jsdelivr.net/gh/langflow-ai/langflow-embedded-chat@main/dist/build/static/
    js/bundle.min.js"></script>
13
14 Configure the embed with: host_url, flow_id, and api_key as attributes.
15
16 7) Apply a blue and white color theme throughout the UI - blue for headers, sidebars, buttons, and
    accents; white for backgrounds and content areas
17
18 Example:
19 Sample Banking Domain User Stories to include:
20 1. As a customer, I want to transfer funds between my accounts so that I can manage my money
    efficiently.
21 2. As a customer, I want to view my transaction history for the last 90 days so that I can track my
    spending.
```

10) Click on **Mode** –Select the **Agent mode**

11) To View the Copilot Usage –Click on the highlighte icon at the right bottom of copilot

12) Ensure that .md file is added to the co-pilot or any coding agent

13) In the Copilot give the below text for step by step implementation and proceed

GO STEP BY STEP Implementation UNDER Instructions FOR ALL STEPS .PROCEED WITH NEXT STEP ONCE UP ON MY APPROVAL

14) Now you can see the Steps from 1 to 7 (since the instruction file has 7 steps)are listed and ready to Implement

Implementation Steps (Step-by-Step):

STEP 1: Create the basic HTML structure with:

- Document header and metadata
- Main layout container with sidebar and main content area
- Body styling

STEP 2: Build the instructions panel in the sidebar with:

- Guidance on how to use the tool
- Clear formatting and styling

STEP 3: Add sample banking domain user stories with:

- Copy-pasteable examples
- Proper formatting and presentation

STEP 4: Embed Langflow chat interface at top-right with:

- Script tag integration from CDN
- Proper CSS positioning (top-right corner)
- Configuration attributes (host_url, flow_id, api_key)

STEP 5: Apply the blue and white color theme:

- Blue for headers, sidebars, buttons, and accents
- White for backgrounds and content areas
- Complete CSS styling

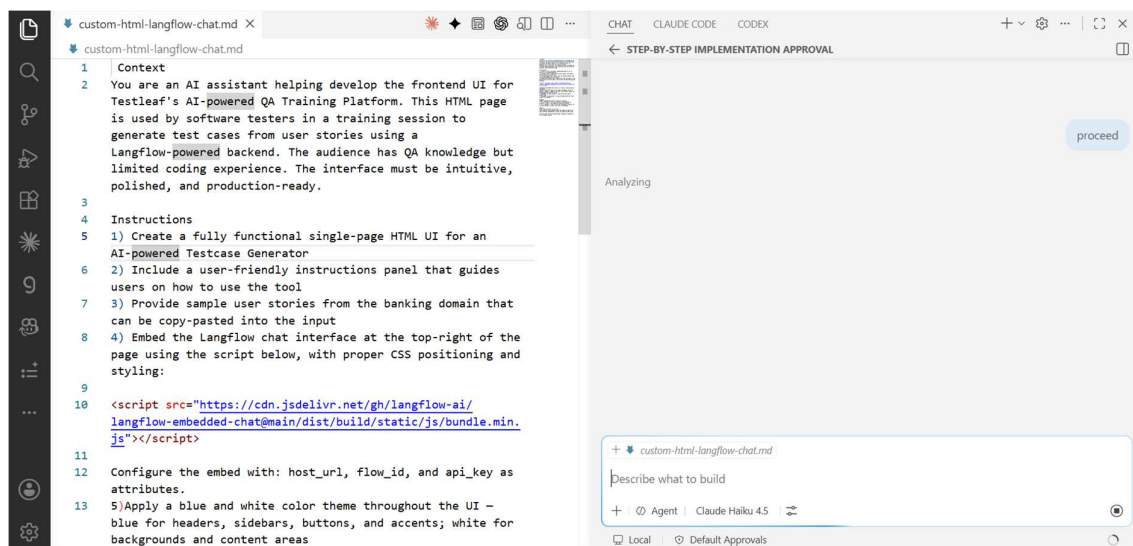

STEP 6: Implement Clear button:

- Functionality to reset/clear the chat or output area
- Proper styling and positioning

STEP 7: Implement Copy button:

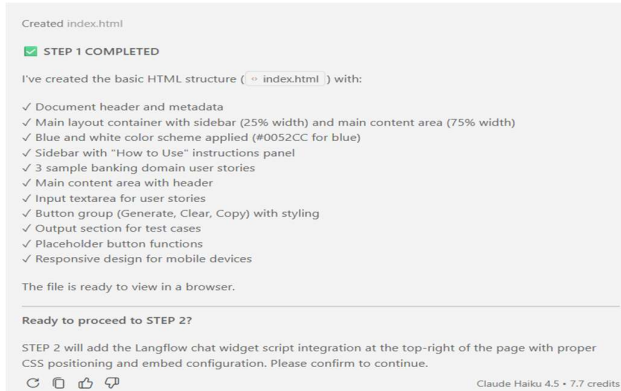

- Copy generated test case output to clipboard
- Proper styling and positioning

15) Type Proceed to start implementing the steps from step 1

16) Step 1 will completed and lists the implementation done .Once after verifying it go for step 2 .By saying to proceed.

17) Likewise proceed with all the steps and also click **Keep (for all steps)** which stores the changes in file
